Paul Vincent Bacani Kylie Plett Braeden Julian Reyes Myers AP Comp Science Period 2

AP Computer Science Password Generator Project

- **Step 1:** If there's an odd number of characters, add the first character to the end of the Password
- Step 2: Change any numbers to its corresponding special character on the keyboard
- **Step 3:** Change every other (start on the first letter) letter to the corresponding digit on a keypad.
- Step 4: Subtract 1 (one) from all odd numbers.
- **Step 5:** switch the very first and last characters.
- **Step 6:** Subtract 2 from all the even numbers (not including 0).
- **Step 7:** Replace all 0 with a capitalized O.
- **Step 8:** change the very first special character back to its corresponding character on the keyboard
- **Step 9:** find the sum of all the numbers in the password and add that number to the end of the password (if there are no numbers then add the sum of all characters at the end of the password)
- **Step 10:** Add the first character of the sites name to the end of the password and the last character of the sites name to the beginning (if they are letters they should be lowercase.)
